SCHAKTBELYSNING

Takes You To a Higher Level

SCHAKTBELYSNING

VÅR SCHAKTBELYSNING LEVERERAS MED ALLT MATERIAL SOM BEHÖVS FÖR ATT FÅ EN KOMPLETT INSTALLATION AV SCHAKTBELYSNINGEN.

LED-slingan har en effekt på 10W / meter. Vi kapar till önskad längd i jämna meter. Vi räknar normalt att längden = schakthöjd + 4 x schaktbredd + 3 x schaktbredd för att få tillräckligt ljus i grop och topp.

Utöver själva slingan skickar vi med eluttag förberett med 5 meter EQQ 3G1,5 samt plugg och buntband för upphängning.

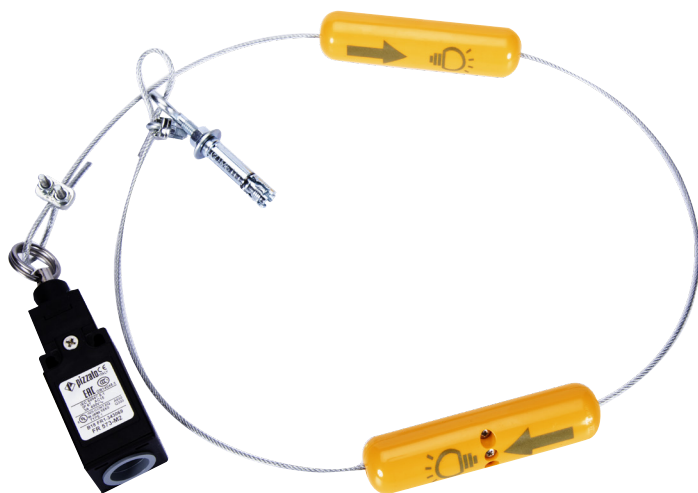

SNÖRTÄNDNING

VÅR SNÖRTÄNDNING LEVERERAS MED BISTABIL ÖGLEBRYTARE (GÅR ÄVEN ATT TRAPP-KOPPLA), PLASTAD WIRE, WIRELÅS, ÖGLE-EXPANDER OCH HANDTAG.

Handtagen skruvas enkelt fast mot den plastade wiren, de är även tryckta med riktningssindikering och vänds beroende på om öglebrytaren sitter i toppen eller gropan.

Om du önskar så kopplas öglebrytaren ihop med eluttaget så att du enbart behöver koppla in en kabel vid installation.

SHORT ABOUT KINDS ELTEKNIK AB

Kinds Elteknik is a second-generation family business. We were founded in 1974 by Mr. Agne Johansson. In 2015, his son Andreas Björklund took over the business but Agne is still working in the company as a senior consultant.

Our primary area of business is manufacturing control system for lifts. We have made controllers for most type of lifts – everything from dumbwaiters to lifts for hospitals, oil-rigs and ships. We manufacture around 150 tailor-made controllers and 1,000 standard controllers per year. The tailor-made ones are always made to customer specifications. All controllers are manufactured in-house in our electronics department in our own SMD-line. The controllers are then built into a control cabinet by our cabinet builders.

The customer is always our main focus and we have made it our mission to be the best time-saving, right quality supplier for the installation companies.

Our customers are mainly based in Scandinavia and Australia, but we have also supplied controllers for Trinidad, Vietnam, Abu Dhabi and Dubai to mention some.

Our technical support is mainly provided via telephone from our office in Östra Frölunda, Sweden. This type of off-site support is made possible by connecting our systems to the Internet. All controllers supplied by Kinds Elteknik can be connected to the Internet to ease support, but also to collect lift specific information such as statistics, alarms and events etc.
